New Double Silver Low-E Glass

We developed two new types of Low-E glass with double silver which block even more solar gain than normal Low-E glass, but let more light stream in. The key performance data are as follows

Product	Reflective Color	Visible light	U-value (BTU/H.FT². F)				Solar Heat Gain Coefficient	Shading Coefficient
		Trans.	Winter		Summer			
		%	Air	Argon	Air	Argon		
3.2(UGSHDE78-6G) + 12A +3.2C	Clear	68%	0.31	0.26	0.31	0.25	0.50	0.57
3.2(IGBHDTE54-10G) + 12A+3.2C	Bluish Gray	62%	0.29	0.23	0.28	0.21	0.36	0.42

Note:

■The coated item IGBHDTE54-10G can be tempered after cutting into various custom sizes and shapes. It gives more options in the production of insulated Low-e glass.

■For more detailed performance data please visit www.intexglass.com.

New Double Edging Machine

We purchased two new double edging machines with as special design. While there are only 18 or 20 wheels on a regular double edger there are 26 wheels on ours. It ensures high-speed efficient and high-quality polishing.

New Water jet

With the new water jet the notch and hole locations will be more precise while chips will be avoided around the edge of the notch. At the same time the production efficiency and yield are improved.

Max size: 60" x 96"
Min Size: No limitation.

2013 China Glass Show in Beijing

We participated once again China's national glass show which this time was held in Beijing. The 2013 China Glass Show is by far the largest glass industry show in China. We showed Warm-Edge insulated Low E glass, SGP laminated Glass, countersunk holes and glass with the DFI easy-clean coating product, including pictures of the various applications of our products.

Innovation is still the main theme of this glass show and there are much more new and creative products and machines being introduced.

Besides the business aspect it is also a once-a-year opportunity to meet up close with customers in China outside the regular visits by the Intex sales staff to their home countries.

Dragon Boat Festival

The Dragon Boat (Duanwu) Festival falls on the fifth day of the fifth month of the Chinese lunar calendar. This year that was on June 12th. Every year the dragon boat festival is celebrated by eating zongzi, a pyramid-shaped dumpling made of glutinous rice and different types of stuffing wrapped in reed leaves to give it a special flavor. Dragon boat races are held all over China as well.

In the southern province of Fujian and in Taiwan people stuff zongzi with pork, egg, ham, chestnuts and other ingredients, making them very rich in flavor.

In the northern province of Anhui, people stuff zongzi with glutinous rice and candied date. This kind of zongzi is always served with sugar dressing.

Which one is better, candied or salty? We have sent this question to the White House website. Your vote will determine the result.
